

Grass Protection

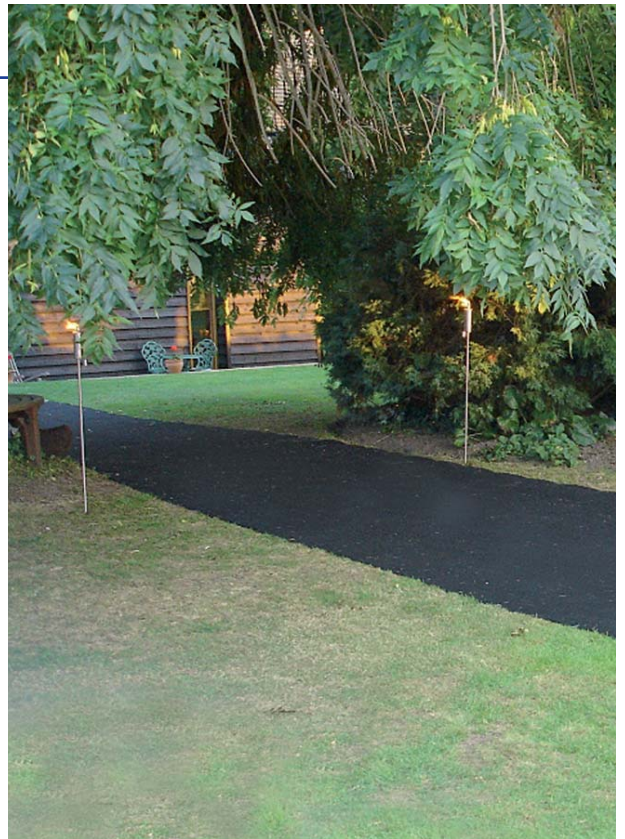

GrassCarpet™

GrassCarpet™ incorporates our heavy duty grass protection mesh, bonded to a strong non woven needle-punched geotextile. GrassCarpet™ can be used to provide two functions for the temporary protection and access requirements on grassed surfaces particularly in wet and muddy conditions:

- With the mesh laid on the ground with the geotextile upwards, GrassCarpet™ provides a clean, stable and safe surface for pedestrians, whilst protecting the grass from damage.
- With the geotextile laid on the ground with the mesh upwards, GrassCarpet™ provides additional reinforcement to the grass surface and further resistance to deformation.

GrassCarpet™ is manufactured from HDPE and incorporates a blowing agent to increase the products traction and grip properties. The mesh is flame bonded to a polypropylene needle-punched non-woven geotextile and is UV stabilised, rot proof and chemically inert.

- Temporary reinforcement solution for wet muddy ground required for access, parking and grass tracks
- Ideal for outdoor events, exhibitions and concerts
- Ideal for marquee paths and flooring
- Temporary car parks and wheelchair access routes
- Temporary pedestrian and vehicle access routes
- Re-useable over and over again
- Quick to install, quick to remove

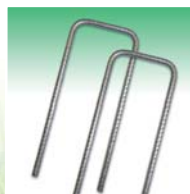

With the geotextile upwards, GrassCarpet™ is ideal for pedestrian surfaces, walkways and paths at outdoor events, parties and weddings. It can also be used as a flooring in marquees or for specialised vehicle access routes.

Fixing Pins & Pegs

Steel U-pins to secure GrassCarpet™ to the ground..

PRODUCT	U-PIN	U-PIN
MATERIAL	STEEL	STEEL
SIZE (mm)	170 x 70 x 6 dia	150 x 30 x 5 dia
OUTER	50 pack	20 pack
PART No.	041824	041825
